ThermoFlex Hard Splints

Arrow Clasps, More
Ideal for Missing
Teeth and More
Severe Undercuts,
Impressions Flaws

The **EMA Devices** fabricated by **Dream Systems** use the **Myerson Hooks and Straps**. The standard appliance design has been modified, incorporating a flat plane design of the splints for added strength and function. The **ThermoFlex Hard Material** is used upon request and in circumstances where there are impression flaws, edentulous areas and where clasping can be of benefit.

An **Intro Strap Pack** is included with each case, which will provide **5mm of additional advancement** from the **Protrusive Bite** provided. The Strap Sequence and Color Flexibility of the Straps will vary by individual case. Straps may be included to decrease the protrusion or strain of a more rigid strap. Additional Straps can be ordered as determined by effectiveness.
